Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments Was hesitant due to her age. Further research led me to believe she would handle it just fine.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Just slowed her down a little more.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments My initial response was, "Oh no! I wouldn't do that TO my dog! I wouldn't put her through THAT!"
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments ONE of my many fears about this whole amputation..."how could a large, overweight, somewhat older dog possibly be able to walk on three legs?" Nooo problem whatsoever!! It was as though she never needed a fourth leg to begin with!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week, Other (please specify) Actually, within the first 24 hours she had it all pretty well figured out.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Prior to the amp, as the limping and pain increased, I knew it would be just a matter of weeks before the unthinkable. Happy Hannah's vibrant zest for life told me she wanted to still savor every moment of pain free life that was presented to her! She wasn't giving up and I owed her every chance to still have a quality life filled with more joy, more loving, more happiness, more sheer bliss than either of us even knew existed!! I learned to let go of my fixation with "time" and replace it with focus on QUALITY and living in the moment, living in the now! We let NOTHING rob us of our sacred treasured time together. This journey isn't "just about an amputation", it is chock full of lessons for the soul that no other experience could possibly give us.....and no other teacher could possibly teach us other than our dogs.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	11-20 lbs (4.98-9.07kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments He is more nervous/scared around tall men.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Amputation was really our only option. I wouldn't want him to try to walk around on a stump after his toes were severed.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments I never had any reservations. We learned our options, considered the facts, and made our choice. It made absolute sense.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments For a 13-year-old, large-breed dog with arthritis, our dog handled it amazingly well. Were there hurdles? Sure (metaphorical, I mean...). Was it all easy? No. And yes, he had to slow down a bit, but he handled it very well.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Shorter
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Absolutely. Total pain relief, and it gave him a chance to live out his life happy. Animals really don't care too much about being disabled. They care about having pain taken away...but after that, they're remarkably adaptable. I'd do it again, 100%.

Q1: What was the reason for the amputation?

Other (please specify)
failed hip replacement, femur fracture, MRSA in bone

Q2: How big was your dog at the time of amputation?

101+ lbs (45.81+ kg)

Q3: How old was your dog at the time of amputation?

5-9 years old

Q4: Did your dog lose a front or hind limb?

Hind

Q5: Were you initially opposed to amputation?

Yes,

Comments
considered euthanization, so glad we did not go there

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

Three weeks,

Other (please specify)
He was also very ill with an upper resp infection and MRSA infection

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No,

Comments more vocal

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?
Absolutely! We have been blessed for every day and every moment that he is still here and an active part of this family. In February it will be 3YEARS!

PAGE 1

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments We didn't own the dog at the time. He is the brother of another dog we adopted, and was being returned to the rescue agency who had "ownership" of him. We objected to the amputation because of his age. The vet said they could do a series of experimental surgeries to see if they could fix his leg using new, experimental procedures that she was not convinced would be successful. Her exact words were, "I wouldn't put my own dog through that" The rescue agency owned him at the time, so they made the decision to amputate. Once we saw how he was, it didn't matter anymore! He is the most happy-go-lucky dog in town!
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments See above :)
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It really was the best choice in this particular case. He was miserable dragging around a useless leg for all those months. Once he was freed of it, he was very happy, and because dogs live in the moment, he basically never gives it a second thought!

Q1: What was the reason for the amputation?

Cancer,

Other (please specify) bone

Q2: How big was your dog at the time of amputation?

51-70 lbs (23.13-31.75kg)

Q3: How old was your dog at the time of amputation?

5-9 years old

Q4: Did your dog lose a front or hind limb?

Hind

Q5: Were you initially opposed to amputation?

Yes,

Comments

I am glad we did it he is doing great, no more pain getting around just fine.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Yes,

Comments He wants a lot of attention which he deserves

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not? I wouldn't want him to be in pain.

Time Spent: 00:11:05

IP Address: 71.232.184.60

PAGE 1

Q1: What was the reason for the amputation?

Other (please specify)
severe arthritis in paw due to injury as a puppy

Q2: How big was your dog at the time of amputation?

71-90 lbs (32.2-40.82kg)

Q3: How old was your dog at the time of amputation?

5-9 years old

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

No,
Comments Worried but not opposed.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Yes,
Comments
She is no longer shy with strangers or new situations and is more out going. She had leash aggression with other dogs previous to surgery, after surgery no leash aggression. We think these changes occurred with the loss of pain.

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

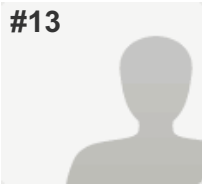

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,
Why or Why Not?
I would do it a lot sooner if I had a redo. It took away Ella's pain and she gets along just as well with 3 legs as she ever did with 4.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	11-20 lbs (4.98-9.07kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments I knew he would be happier with a shorter recovery time. He is an active dog and my main concern was that he be as comfortable (pain reduction) as possible.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments He doesn't turn to the right as well as he used to, but still runs and jumps like before.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments He seems friendlier and less grumpy.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Because I know he had an instant reduction in pain. He gets along just fine without his hind limb and has become an ambassador for animals with special needs. He shows people that life is just fine with 3 legs!

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments Was very unsure what to expect and it seemed so dramatic an option for a potentially short period of life left. I was also very unsure how an older (9.5 years old) larger dog would cope. I wasn't opposed - but didn't leap at the option. There were a lot of questions and research before I came to the decision to amputate.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments She never fully regained a high level of mobility as arthritis set in within 4-5 months post amputation which slowed her down considerably. However, she was able to get around under her own steam for most of the time. She did need assistance towards the end of her life due to complications with cancer (vasculitis).
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One month
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Yes - I wouldn't hesitate if it was the right option for the dog and the dog has the personality to cope. I don't know that it is the right option for every dog or every owner. But their resilience at bouncing back from such major surgery and their adaptation to their new life just astounds me. I am also a lot more educated and know so much more about amputation and recovery thanks to Tripawds.com and the stories shared by pawrents from around the world. It made our journey just that bit easier in what was a very tragic time.

PAGE 1

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments I did not know if she'd do ok with a front limb amputation because of her deep chest and weak hind end
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Because the vets thought it was just OA, she was not weightbearing at the time of her amputation
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) One day
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments She lost her littermate 1 week after her amputation. She missed her sister but, did not seem to miss the limb
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? She was immediately pain free. Only wish I could have done it sooner

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	21-30 lbs (9.52-13.6kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments I can't really say opposed, it just seemed like such a harsh option especially because of how quickly this cancer appeared and had to be treated. We really didn't have time to think about things due to being in shock.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments I don't think he ever was quite as happy a dog as he was before, but he never complained and adapted to his new normal very quickly for a senior dog.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? I say yes because if amputation is the only option I would not hesitate to go there. That being said, although I hope never to face the choice again, I think I would take some extra time to consider all options now that I am better educated about cancer issues. If the amputation was due to a birth defect or accident I don't think I would even pause about making the decision - why would I want my dog to suffer with the pain of an unfixable leg.

Q1: What was the reason for the amputation?

Fungal Infection

Q2: How big was your dog at the time of amputation?

11-20 lbs (4.98-9.07kg)

Q3: How old was your dog at the time of amputation?

5-9 years old

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

No,

Comments

I felt tremendous guilt that I hadn't somehow prevented the situation requiring amputation (joint disintegration resulting from subcutaneous valley fever), but when the doctor assured me that amputation would be the best way to eliminate pain and restore quality of life, I was immediately in favor of it.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Good

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

The Same

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments We were worried about our Irish Setter's age and previous arthritic issues. She definitely surprised us all. Eight days post op and she's doing great, we hope to have her with us as long as possible
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Amazing transition from limping on four legs to getting around on three. She's a large breed with previous rear end weakness, so, both our vet and we were concerned but Karly has done great. We hope to have her with us for a long while
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week, Other (please specify) There's no dot for 'other' so we chose 1 week. We are amazed at an almost 12 year old large breed's adjustment to losing a limb
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Her demeanor improved drastically, she's obviously happy to be free of the pain in the limb that was amputated. She's happy, wagging her tail and enthusiastically looking forward to getting outdoors every morning.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Oh, heck yes, we would do it again. Our vet put it this way, she was in so much pain, pre amputation, that it was amputate or euthanize. We couldn't get it scheduled fast enough. It really pained us to know our Karly's bone was literally exploding from the inside out, amputation was a huge relief to that pain.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	21-30 lbs (9.52-13.6kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments It seemed radical initially and I was concerned both about major surgery, recovery time and quality of life.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She was able to hop out of the vet hospital - I thought I would have to carry her. We were going on short walks just a couple weeks post-op. It did take her a little while to maneuver and learn new ways to move but she was determined to do so and never appeared frustrated.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments Only change was a couple of things she can't do anymore like twirl, jump as high, and ride in the car with her front paws on the middle console and back legs on the back seat.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? I would even have done it sooner. She adapted very quickly, still has a high quality of life, and could still go on hikes and nightly walks (her favorite thing).

PAGE 1

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments Worried about the stress on his other legs because of his size.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments He didn't want my help outside after 2 days. Going up stairs after a week.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments We have four dogs. Sam became careful of his situation but got a little more "stand up for myself" without his front leg.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Because of the cancer we knew this was the only way to get rid of the pain right away..after surgery we were surprised about how quickly he didn't want our help and how he could do it on his own. He played fetch just like before after a few weeks. He got along just fine without one leg. I would do it again in a heartbeat.

Q1: What was the reason for the amputation?	Other (please specify) Puppy mill owner broke her leg and never had it vetted.
Q2: How big was your dog at the time of amputation?	1-10 lbs (.45-4.53kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments We adopted her after the leg was amputated. The leg had to be amputated because it had been broken and she went too long without vet care.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She runs, she jumps, she chases the cats in the house. She plays with her other pack members.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) I am not sure. We adopted her after her recovery.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments She came to the house with 3 legs so the other animals don't know her in any other condition,
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It had to be done to increase her quality of life and her health. Without the amputation she would have strained something having to hold it up and out of the way when she ran. I have seen the videos of her with the dangling leg. She ran and played but she had to hold it out of the way to get around.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments When he w as diagnosed w e knew right aw ay it w ould be either have the amputation or lose him.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Two days after Opus's amputation of his right front leg he w as w alking from the hospital unit until he turned the corner and saw us dow n the hall. At that point he promptly sat dow n and started "crying". The vet got him back up and he w alked on dow n the hall to w here w e w ere. My husband then picked him to carry him to our van. At home that night I slept on the couch and had his bed on the floor by the couch. If my hand came off him during the night he w ould start w himpering but by the next day he w as fine. Three days later my husband built a ramp so he could w alk up into the van but Opus promptly w alked around the ramp and jumped up into the van and up onto the seat. At that point w e knew he w as going to be just fine and in fact he adjusted much faster than w e did.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? We had Opus for 5 more years after the amputation - five years w e w ould not have had w ithout the amputation.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments Since it was to save her from pain, and quite possibly save her life, we opted for the amp. We were worried we made the wrong decision with the pain she was in. It only took 2 days before she stopped crying out in pain, and begin to get up on her own. She also received 5 chemo treatments. She has such a will for life, and loving every moment of it. We are now glad we made the decision. She gets around fine, only can't do a few things, jump on bed,
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks, Other (please specify) she got up on her own just 3 days after amp, and we had trouble keeping up with her to have her use a sling.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments She seems to bark at more things now, then before. Not sure if she feel vulnerable, or what.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes

Q1: What was the reason for the amputation?

Accident

Q2: How big was your dog at the time of amputation?

31-50 lbs (14.1-22.67kg)

Q3: How old was your dog at the time of amputation?

1-4 years old

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

Comments

He wasn't my dog at the time of amputation. His previous owner was given the choice of an ORIF or amputation. She chose amputation because it was less expensive and then decided after all was said and done she no longer wanted him.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

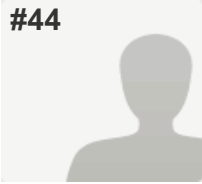

No,

Why or Why Not?

I'm a physical therapist by profession and would have been more than willing the needed rehabilitation following an open reduction internal fixation. Had the amputation been done due to osteosarcoma I still would have done it. Animals adapt so much better than do humans to limb loss.

Q1: What was the reason for the amputation?

Cancer

Q2: How big was your dog at the time of amputation?

71-90 lbs (32.2-40.82kg)

Q3: How old was your dog at the time of amputation?

10+ years old

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

Yes,

Comments

We were on board pretty quickly upon realizing it was really the only feasible option to her more time with the least pain.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments Amazingly well. She continues to surprise us.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No,

Comments

Not really. She's very much the same dog. Movements have changed, such as nudging us with her head instead of pawing us to pet her. That sort of thing.

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments It was a shock, but the only option to stop the pain and spread of cancer.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? In the first week I did wonder whether we had done the right thing as it was awful to watch him struggle and the lack of sleep from looking after him 24 hours a day, got to us. Also, he was a seemingly healthy dog, apart from a slight limp, before the op, which made it much harder. However, two months on and he is running after his ball and jumping in and out of the river as normal. We are lucky that we were insured and the chemo is given in pill form, which makes it less stressful and also cheaper.

Q1: What was the reason for the amputation?	Other (please specify) Injury as pup not treated, locating patella plus bone deformity, first surgery to correct failed
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments I prefer to try and save a limb if possible. He was my foster dog. Rescue decided to remove the limb after the first surgery failed and there was no guarantee on second surgery
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments I would say great, however there is an exception, he has phantom limb pain. There was some trial and error, but it is now easily managed with a low dose of Gabapentin, which is not expensive. He just had his first attempt at agility and did great and walks 5km per day off leash through the woods
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) Immediately, other than some strength and the struggle with phantom limb pain
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments He is more consistently happy now that he has no pain
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It greatly improved his quality of life. He is now always the goofy happy dog I used to see glimpses of. And I adopted him, my first foster was a foster fail

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? The months prior to his operation, while we were trying to get a diagnosis, his quality of life declined significantly and he started to get depressed. Since the amputation he is walking, hiking, swimming, and is back to his normal happy self.

Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Grady hadn't really used his limb (he had a localized soft tissue tumor that grew into his elbow, so it no longer "hinged") for almost 3 months prior to his amp. He walked to the car 6 hours after surgery, went to the bathroom 12 hours after surgery, and snuck behind our backs onto the couch 2 days later. At 6 weeks, he really turned the corner, was no longer on arthritis meds, and his endurance is improving rapidly :)
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two months
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It was the only option to keep her alive. She lived to be 13 and it was amputated when she was 7. She had about 4 really good years after the surgery before she began to struggle and needed help walking, going to the bathroom and could no longer support herself on her own.

Q1: What was the reason for the amputation?

Accident

Q2: How big was your dog at the time of amputation?

11-20 lbs (4.98-9.07kg)

Q3: How old was your dog at the time of amputation?

1-4 years old

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

Respondent skipped this question

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

Respondent skipped this question

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Respondent skipped this question

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Respondent skipped this question

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Respondent skipped this question

PAGE 1

Q1: What was the reason for the amputation?	Birth Defect
Q2: How big was your dog at the time of amputation?	21-30 lbs (9.52-13.6kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments We didn't own her at the time, she was in foster with us and the Rescue made the decision to amputate but I agreed having seen her struggling with the deformed leg that it was the right thing for her. We have since become foster failures and she now lives permanently with us.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Because the deformed leg was in her way and she is much more mobile without it and loving life - having three legs doesn't stop her doing anything, except jump out of my car boot.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments When I answer that I was initially opposed to the amputation, I just mean that in that moment, when the doctor first suggested it, I thought it sounded awful. I thought it would be the end of him playing and being the dog we knew and loved. By the next morning I had accepted that it was the best option and was ready to move forward if the biopsy came back as cancer (it did). His leg was amputated a week after we saw the lump and in that week I came to terms with it and was 100% on board with the amputation.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments The 2nd day was probably the toughest and I worried that he would never be able to run. By day 3 he was getting around pretty well. By day 4 I was having to stop him from doing stuff.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments I said "yes"; but it is probably more of a "maybe". It at least seemed that he became even a better dog. He was a rescue and had had some trust issues; but those seemed to totally go away.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? In a heartbeat. I know that the amputation bought us months with him that we would not otherwise have had. We had to do whatever we could to try to beat the cancer and that was step one in that fight.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments Only because Barney was a giant breed that already had spinal disc issues so was concerned he wouldn't cope
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments Barney had a great fighting spirit & learnt to adapt very quickly however it wasn't easy as the nodding of the head from hopping and the realignment of the body took its toll on him but I don't regret my decision and Barney remained a happy boy throughout the 18 months at being a tripawd
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Most definitely as I do keep the giant breeds and Barney was certainly NOT a good candidate to pursue due to spinal issues BUT he showed me that it was the best decision I ever made and it gave him a further 18 months of life which he never would have got had I not amputated so yes if I were unlucky enough to have this happen to another one of my dogs providing I felt they were strong and willing enough to cope I would do it all over again

Q1: What was the reason for the amputation?	<i>Respondent skipped this question</i>
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments Kind of wish we had done the amp surgery sooner. We just didn't know what type of cancer my Polly had, but Osteosarcoma was ruled out. Turned out to be a rare presentation of hemangiosarcoma in her right front leg. Went 12 rounds of chemo, still needed another surgery. Then 3rd surgery was her leg amp.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Her surgeon told me, as soon as anesthesia wore off from her amp surgery, she was up, wagging her tail, and wanted to go out to potty.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) Less than a week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Knowing now that this would be our only option after a couple of other surgeries and many rounds of chemo, not to mention Polly's overall stress from everything involved, and it possibly will give her more quality time with me, a big YES. Also knowing that she did adapt so well, sooner would have been much better, all the way around. Just pray she will ultimately have much more time with me, just never know with cancer.

Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments My dog amazed me with how well she did. I cried every day upset about amputation but I am so happy we did it for her now . She gets along so great!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Amputation is better than having your dog suffer or having to lose a family member. There is really nothing a tripawd can't do! I tell my boyfriend all the time that I can't picture having a 4 legged dog after having a 3 legged one!!

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? The pain relief from bone cancer was immediate and the benefits of the surgery were also immediate. The time it took to adapt to the loss of the limb was as much less than I had thought behavior is not affected.

Q1: What was the reason for the amputation?	Birth Defect
Q2: How big was your dog at the time of amputation?	11-20 lbs (4.98-9.07kg)
Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	<p>Yes,</p> <p>Comments</p> <p>1st amputation was mid-humerus at the shelter when he was 3 months old. I adopted him and took him home that day. he had no problems adapting and no change in behavior. he had to have his scapula amputated when he was 13 months old and we also found out that basically all of his joints had congenital issues (hip and elbow dysplasia, etc.) he also had to have the anconeal process removed from his remaining elbow and FHO sx on his right hip. There was some depression after these sx's due to pain meds and antibiotics. Biggest issue was getting him to eat.</p>
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Shorter
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	<p>Yes,</p> <p>Why or Why Not?</p> <p>All of the surgeries improved his quality of life and he is seeing a vet certified in canine rehabilitation. The quality of life is what is most important to me, not just stretching out how long he lives. Despite all of his issues, he plays 100 mph with my high-energy 4-legged dogs and goes to the dog park. he is a pure German Shepherd and very smart about choosing to rest when he needs it.</p>

Q1: What was the reason for the amputation?

Other (please specify)
unknown (happened before I adopted her, rescue did not know either - found as a stray)

Q2: How big was your dog at the time of amputation?

21-30 lbs (9.52-13.6kg)

Q3: How old was your dog at the time of amputation?

under 1 year

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

Comments N/a Adopted her after amputation.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,
Comments
Don't know how she was before, but she gets along great w/o the leg.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

Other (please specify)
Unknown. Adopted her after amputation and healing.

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Comments
Unknown. Adopted her after amputation and healing.

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

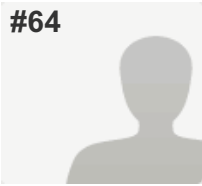

Respondent skipped this question

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,
Why or Why Not?
I was not the one who made the choice, but she is a young, happy dog who gets around very well and enjoys life to the fullest, so I feel it was absolutely the right choice.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments While I wasn't outright opposed to amputation, I was very concerned about my boy's future quality of life - would he still be able to get up on the couch and bed for snuggles? I found a few YouTube videos of three-legged Dobermans, which greatly eased my mind.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments While it's a little tricky getting around on a hard-wood floor, and I always hold my breath as he goes down the deck stairs, overall, losing a leg has not really affected him. We still go on regular walks, although now they're more like jogs since that momentum is easier to maintain for him. Our walks are shorter, though, since it takes so much more energy.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? I would definitely do the amputation to get rid of the main cancer and provide pain relief - those were very important factors. Seeing how agile and lively my dog still is nearly 8 months later confirms I made the right decision for him!

PAGE 1

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	11-20 lbs (4.98-9.07kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments We adopted our dog as a tripawd, shortly after (one month) amputation.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments We did not know what his life was like prior to amputation, but we've had him now for 8 months and have seen him grow stronger than when we first got him. We think he has adapted just fine.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One month
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments We think he initially became anxious after the loss, especially in the presence of other animals.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? We understand the amputation was done to save his life (severe infection). If I were asked for advice I would not hesitate to recommend amputation.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments He's a big labrador so I had initial worries about how he would cope. My only experience of three legged dogs were whippet or jack russell type-small & slight.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments Traumatic for the first two weeks but steady progress from then on.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two months
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments He wasn't himself for a few weeks but I put it down to the operation & his adjusting.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Without hesitation. He was four years old. He's now eleven and a half. He struggles sometimes but for the main he's been happy and pain free and has had a great life.

Time Spent: 00:05:34

IP Address: 174.24.34.75

PAGE 1

Q1: What was the reason for the amputation?

Other (please specify)

Unsure; Adopted her at 3 months old and she was missing one paw completely and the other paw was very deformed (looks like 1/2 paw). It is guessed to be a result of birth defect or possibly her mother accidentally chewing on her paws too much. She was found with her other abandoned littermates around 2 months of age..

Q2: How big was your dog at the time of amputation?

1-10 lbs (.45-4.53kg)

Q3: How old was your dog at the time of amputation?

under 1 year

Q4: Did your dog lose a front or hind limb?

Hind

Q5: Were you initially opposed to amputation?

Comments N/A.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments

She did amazing for the first 10 years of her life, although her gate is similar to that of a bear cub and she has developed the beginning of arthritis. This was not surprising given that she mostly has walked on her front two paws for most of her life. At the age of 10, her back nubs (what we call the missing paw area) kept opening up and exposing tissue and bone. After 1 year of treatment she now has prosthetics to ease the pressure placed on her back nubs. She is now walking on all four with the help of the prosthetics. And for the first time in her life is walking similarly to a normal dog.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week,

Other (please specify)

Not quite relevant as she has never had these paws.

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Comments N/A

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

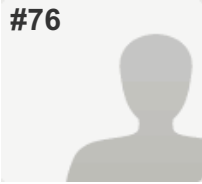

Respondent skipped this question

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Why or Why Not? N/A

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	<i>Respondent skipped this question</i>
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments When it came to making the amputation decision, first and foremost was the quality of life for our pet. There were so many questions, what-ifs, decisions that had to be made rather quickly. That was quite stressful and emotional. We had to trust our gut-feelings, embrace our veterinarian's knowledge, and do the very best we could with those. Our pet deserved nothing less.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Quality of life for our pet was first and foremost in our mind.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments My initial reaction was to have the dog put to sleep but then I thought "well I wouldn't euthanase a human being for breaking a leg" so we went with the amputation
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She is not as capable as before, (tires more easily and finds it hard to walk and stand although she is fine running) BUT I don't think she cares one bit about having 3 legs. Our vet said it is more traumatic for the owners than the dogs and I think he was right
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Having previously been extremely destructive when left "home alone" she changed overnight to being perfectly fine when left at home
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? She has good quality of life and does not appear to be at all disadvantaged by the amputation.

Q1: What was the reason for the amputation?	Fungal Infection
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments He was limping for eight months prior to his amputation while we tried other methods to try to clear the fungal infection. However, they were unsuccessful and ultimately amputation became the best option for him.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Once he was off the pain meds his old personality that had disappeared slowly over the eight months leading up to his amputation really came back. I didn't realize how much he had changed until he was finally feeling better and no longer trying to navigate the world with a sore leg that was splinted during all his waking hours. The changes in his behavior and personality have certainly been for the better.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? And I probably would have done it months sooner. He has adapted very well and does many things better now than he did when his leg was in the splint - stairs are significantly easier for him now.

Comments
Amputation w as performed before I met the dog - fostered her
through recovery then adopted her

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,
Comments
she w as 6 - 8 w eeks old at time of amputation - she has no
idea she is any different from any other dog

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

Other (please specify) Immediately due to her young age

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

The Same

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,
Why or Why Not?
the people at the shelter had a hard decision to make -
amputate or put her dow n. She is a very active, fun, life loving
happy 10 moth old now , so yes it w as a good decision. Since
it is a front leg, I am careful about her jumping dow n off
structures and have been using a w eb master harness to
assist w ith difficult terrain

Q1: What was the reason for the amputation?	Other (please specify) bacterial infection
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments We had maintained her arthritic elbow for 4.5 years when this suddenly changed and the joint fragmented causing severe pain and inability to walk. Amputation was the only option to save her life. My wonderful veterinarian and I did thoroughly discuss if she was a good candidate though. She's doing well after 5 months.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She's too athletic though and has to be monitored closely or she hurts her remaining foreleg and shoulder.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week, Other (please specify) She was up the next morning post-op.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Shorter
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Amputation was the ONLY way to save her life.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments We were concerned because we didn't believe a heavy mastiff would thrive after amputation. Had it been a front leg, the decision may not have been the same. However, our mastiff did exceptionally well on 3 legs and astounded us all by his quick recovery and his agility and mobility in the months following his amputation. He was very vigorous and energetic, and seldom had issue with only having 3 legs. The only reason he did not live well and long after the amputation (only 10 months) was that the cancer spread to his other hind leg.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Three weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments We were uncertain as to what his quality of life would be. And our primary care vet did not think we should amputate because of his age and size, but our oncologist recommended it, as she'd seen dogs his age and larger have success.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments He gets around well and has a good quality of life. His arthritis complicates things a bit, but he's on medication for that, which has helped greatly. I think if he didn't have arthritis I'd say he was doing great.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments His behavioral changes are due to his changed circumstances. For example, he can't play as well or go out with his dog walking group anymore, so he's much more interested in every dog we meet now.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? He's a happy dog who's enjoying his life post-amputation. Our fears about his quality of life were proved wrong. Even though his mobility is decreased, he still enjoys his walks/hops and when we want to go further (to the park) we take him in a wagon, which he also enjoys. I'm very very glad we had his leg amputated. So far he's had 7 months of good, happy life.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments More affectionate as she came to depend on me to help her up and make sure she was OK.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Shorter
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Annie had her amputation on Aug 6, 2013 - she was a redbone/black & tan coonhound. She was 12 or 13 years old. The doctors were 95% sure she was cancer free as the type of cancer she had was not supposed to spread. On Aug 24, 2013 she collapsed in so much pain. Took her back to the same place that did her amputation and they found a huge tumor in her abdomen they did not know was there. I had to let her go on Aug 26th. I made the right decision about the amputation and would do it again if I had it to do over. The last week she was so incredibly happy. She was able to do things one last time except we did not know it at the time. She had a tumor on her back leg that we had watched grow for 1.5 years. The doctor said it was inoperable because of how it was on her leg. It went from small to big, then her leg swelled up and we were hoping it would come down with medicine but it did not work. That is when we did the amputation. Two days before she collapsed I had taken her to the doctors to have her stitches taken out. She was so happy! She had been to this doctor every 6 weeks for years to get her nails trimmed. This time she sniffed all over the place and was just so excited and happy. The tumor really shocked us all.

PAGE 1

Q1: What was the reason for the amputation?

Accident,

Other (please specify)

Gracilis Myopathy - possibly an injury before we got her

Q2: How big was your dog at the time of amputation?

21-30 lbs (9.52-13.6kg)

Q3: How old was your dog at the time of amputation?

under 1 year

Q4: Did your dog lose a front or hind limb?

Hind

Q5: Were you initially opposed to amputation?

No,

Comments

We tried to do physical therapy to avoid amputation, but knew immediately that this could be a possibility.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments

She still has some phantom leg issues. She tries to starch her ear with the nonexistent leg and will occasionally try to bite the leg or look back at it. You can tell she is confused.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Yes,

Comments

She became much more energetic and happy. I think prior to the surgery she was in quite a bit of pain but it had been chronic since she was little so didn't show a lot of signs on pain.

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

She is much more better off. I am glad she had complications for her physical therapy that made us amputate when we did. The vet examined the leg after surgery and indicated that there was only scar tissue and no viable muscle left in her leg. The scar tissue could've continued to grow into her other leg.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments Repair w as n't really an option given the location of her injury.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? She w as injured w ith another dog, w hose injury w as in a location that made repair more of an option. That dog had a much longer recovery than Mitzie did after her amputation. The only time Mitzie seems to notice her missing leg is w hen she tried to scratch herself w ith it, or w hen she w ants to jump onto something very high. But she can still jump if she tries, she just has to make more of an effort.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments Vets at the Emergency ER suspected my Greyhound's broken leg was due to Osteo. He said that when they opened her up they could either amputate, which would give her the best chances of quality of life, or patch up the leg and would be very weak. We told him to if he felt this was her best chance as some quality of life, then amputate. Once in surgery, he called said the bone was spongy suggesting cancer and again asked us what to do. We said amputate and never regretted our decision. Two years later Aimee is cancer free and still loves to chase the cats on her daily walks.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She gets a little tired walking, but that is also due to age (she is now 13). Other than that she acts like she never lost the leg. We keep her kenneled so she does not run around and hurt herself, but the kennel consists of a room with a baby gate or a half the living room (depending on where we are in the house). She likes being in the middle of the action and we oblige her.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer

Tripawd Dog Owner's Experience & Satisfaction Survey

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

I think in Aimee's case being a Greyhound with Osteo, I have never regretted that decision. With the amputation and her doggie chemo she has beaten the odds even above what her Cancer Vet would have ever believed (we were given 6-18 months and now 24 months plus). After the first days when she learned how to walk with just 3 legs, nothing has stopped her. She even tried to keep up with our younger greyhounds. I truly believed the amputation saved her life and her quality of life is not affected for she is still very much a part of the family activities.

PAGE 1

Q1: What was the reason for the amputation?

Birth Defect

Q2: How big was your dog at the time of amputation?

21-30 lbs (9.52-13.6kg)

Q3: How old was your dog at the time of amputation?

under 1 year

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

No

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Shorter

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

Being born with a birth defect, she could not use her bad leg and it was actually in her way when she walked or ran. Since the amputation at five months old, she has been so much more comfortable when lying down, playing or exercising. She celebrated her fifth birthday in May (2013) and she is loving life as a tripawd! :)

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	<p>Yes,</p> <p>Why or Why Not?</p> <p>Absolutely. First of all to relieve the dog from the pain. My dog adapted quickly, walked the stairs, could swim again. She's a happy dog and though diagnosed with osteosarcoma stage 2-3, with a bad prognosis of 4-6 months of life, she is still alive and kickin' at 14.5 of age, almost 2 years post amputation, without chemo.</p>

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments We were really concerned about our senior, large breed, Irish setter girl being able to adapt to life on three legs. She has had rear end weakness in the past but the cancer took us by surprise
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week, Other (please specify) Less than a week. There is no spot to check 'other'
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments She immediately perked up. One day post amputation, she was barreling through the bushes in our yard, playing with our 5 year old English setter, Flash
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Heck yes, we would do it again. We knew our girl was in constant pain before the amputation. The surgery was the only way to get rid of the pain and coupled with chemo, we hope to buy a little quality time with our previous girl

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments At his age (almost 15) felt it would be too hard for him to adapt, he already had arthritis in his hips. We also were not willing to go through chemo with him.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments He stays out of the other 2 dogs way now . He used to get in the middle of everything.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes

PAGE 1

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	1-10 lbs (.45-4.53kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments I w asn't opposed, just uninformed of w hat to expect. Our vet w as w onderful at explaining our options and not pressuring us to try repair vs amputation.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments He adapted just fine! It w as amazing to w atch him be completely normal afterw ards. The only thing our little guy took a month or so to figure out w as how to pee standing up again. At first he w ould prop his back leg against the fence to keep his balance w hile peeing like a boy, but soo he got his balance dow n and can pee like an self respecting boy dog should. It's such a small thing to see him obviously trying to figure out, but it seemed to matter to him.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One w eek
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Because he didn't change. And the recovery w as shorter and less hard than repairing his leg. I think if w e tried to repair the leg, it w ould have been so invasive and I can't imaging the recovery and therapy he w ould have had to endure. This seemed the KINDER of the options.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments Initially the thought of amputation was emotionally overwhelming, but we felt he was a good candidate for the surgery. And we were lucky to be able to afford the surgery. We wanted more time with him, he's such a good and special dog, our boy.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Three weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? We would. It's given us more time and he's temperament is just as beautiful post surgery as pre. I want every day I can have with him.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments Obviously, it was a last resort, but we were never opposed to amputation.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments He had already been limping for 5 months prior to amputation. Having the leg removed just made it easier and less painful to get around. He knew the mechanics of hopping on 3 legs. When he runs, you can't even tell that he is missing a leg.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? I would rather get the amputation done than prolong the pain any more than necessary.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments Initially I felt it was cruel, but when we found out that the cancer was eating at his bone and causing him pain and that the amputation could remove that pain while giving him a chance at survival, we changed our minds. It became more about how would he have the best quality of life. And when we were told that he would be able to run and chase his ball, despite having only 3 legs, that was all we needed to hear. Seeing him happy on 3 legs is far better than it would have been to see him limping or in pain on 4.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments The doctors told us he probably wouldn't be able to "reverse", but he has learned to back up just fine. Even with only 1 front limb, he still manages to dig holes in the yard and hold his bone to chew on:) The only restrictions he has are those that we place on him for his safety and well being.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Initially there was some re-learning and some changed behavior due to the time it took to gain strength and adapt to the new body balance, but recovery was remarkable and inspiring.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer

Tripawd Dog Owner's Experience & Satisfaction Survey

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

He can run, he can play, he is happy and all of that is worth it. It's so hard to make that choice for your pet-- I felt like we were doing something TO him, but I had to realize that we were actually doing something FOR him. I'm so happy we made the decision to amputate and give him the quality he deserves.

Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Fair, Comments Lots of pain and muscle spasms post surgery. Medications did not do much to alleviat the pain and discomfort.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments In pain and unhappy acting.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	No, Why or Why Not? Would not do amputation on large dog for cancer again. My dog only had tw o months post surgery and chemo before the cancer metatasized to his lungs. He w as in horrible pain from muscle spasms after the surgery. His quality of life w as lost with the leg. It w as heart breaking to hear him crying out in pain for weeks after the surgery. I w ould be fine with amputation for injury, trauma.

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? We rescued Lulu after she had been hit by a car. She was heartw orm positive, skin and bones and pregnant. Her front leg had nerve damage and she had no feeling in it. She had started chew ing on her leg as she could not feel it. Amputation was the best option. You would never know she is missing her leg as she runs as fast as she ever did and still digs w ith her one front leg!

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments we were really concerned about amputating an almost twelve year old, large breed's leg. She has a history of rear end weakness, which concerned us even more. As the diagnosis sank in, we realized that the only choice was amputation and chemo; we spoke to our supportive and much trusted vet and have not looked back since the amputation. It was the right choice.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) less than a week. She was up on her own on the same day of the amputation, however, we left her overnight so she could receive IV pain meds and fluids. She has adapted great to the concept and we have trouble slowing her down.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments incredible increase in her energy it's obvious to us the slow down in our senior girl was due to the pain of the leg pre-amputation.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Knowing what we know now, we would have scheduled the amputation the minute we got the diagnosis, instead of waiting two weeks. The extra time gave us time to research the options and honestly, finding Tripawds helped more than you'll ever know. Just knowing there's a community out there supporting and cheering you on helps greatly. Thank you for being there for us

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? There is less anxiety with just taking the limb rather than dealing with multiple surgeries for reconstruction. And they cope so well.

PAGE 1

Q1: What was the reason for the amputation?

Other (please specify)

Born missing right rear leg from "knee" down.

Q2: How big was your dog at the time of amputation?

1-10 lbs (.45-4.53kg)

Q3: How old was your dog at the time of amputation?

under 1 year

Q4: Did your dog lose a front or hind limb?

Hind

Q5: Were you initially opposed to amputation?

No,

Comments

She was born into a litter from our oldest dog, and I did not want to give her up for sentimental reasons, but also because I was worried about if or how well another pet owner would look after her. I had no worries about taking care of her myself and providing a good accommodating home for her.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments

During her first 4-6 weeks, it was clear that she had some soreness at the end of her stump whenever she tried to use it for weight-bearing, and she guarded it pretty obviously most of the time. As she has gotten older (3 yrs old next month), she has gotten used to using her stump routinely to climb obstacles, right herself, and balance while standing.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

Two months

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No,

Comments

As a puppy, she would play and roughhouse with our other three dogs. Frequently they would go after her "good" rear leg when play-fighting, and she seemed to learn that it was her main weakness or difference from the others. But every time, she stood her ground, and by the time she was a year old none of the other dogs would go after her rear legs.

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Tripawd Dog Owner's Experience & Satisfaction Survey

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

I'd certainly take on another three-legged dog or cat if the opportunity arose. If I had an otherwise healthy pet who fell ill or was injured enough to need an amputation, the experience I've had with my current dog would be a prime consideration. It has shown me that I worried probably more than I needed to about her ability to adapt and thrive, and I believe the same would apply with a bona fide amputee pet.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	91-100 lbs (41.27-45.35kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments Trina tolerated the surgery quite well with minimal discomfort and the following chemo as well.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She hopped onto the couch and refused to sleep on a bed on the floor from the minute she came into the house. She just wanted her same spot. Then did stairs the next day and I helped her hop into the big bed. She was determined to be the same as ever.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Comments Not really, she adapted quickly.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? She had multiple tumors and a severe fracture. Not a doubt in my mind she needed it.

Q1: What was the reason for the amputation?	Other (please specify) Unknown - we adopted our dog from a rescue and the previous owners who left her at a shelter wouldn't say what happened.
Q2: How big was your dog at the time of amputation?	1-10 lbs (.45-4.53kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments She gets around fine, but she's 11 years old so some of her mobility issues may be old age related. She runs for treats and walks fine but otherwise just wants to rest.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) Unknown - see #1
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments Unknown - see #1
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? I didn't make the choice to amputate, but my dog is doing just fine. I don't know the circumstances of her amputation or her demeanor before, however, she is happy with us. If she was injured or ill I would explore whatever options were available to help my dog survive and adapt.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments Realistically it was always an option. I asked the surgeon to save it if he could, but if not then to amputate.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments It has only been 2 weeks, most of which he has been under the effect of the meds. So cannot tell exactly how well he is doing. However, he does not seem to have any issues so far.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) The amputation only occurred two weeks ago. For most things, adaptation seems to have been pretty fast. I am sure there are other things that will take a while longer. We are both still learning together.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Again, we are only two weeks in. I am not sure what is a true chance and what is still meds. However, he does seem to have calmed down a little. He has also become a little needier - following me everywhere, where previously he would just let me wander around the house.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Definitely. We did what we could to try to save it. However, his quality of life comes first. He is a resilient soul, and has adapted well so far. Having a useless limb would have been worse.

PAGE 1

Q1: What was the reason for the amputation?

Accident,

Other (please specify)

Broke what would be comparable to human wrist at growth plate when he was 6 mos. Surgery was an option but did not allow for long term relief of joint issues.

Q2: How big was your dog at the time of amputation?

11-20 lbs (4.98-9.07kg)

Q3: How old was your dog at the time of amputation?

under 1 year

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

Yes,

Comments

Yes because it was sad, scary and very unexpected. But ultimately decided that he would be ok and it was the best option long term. Do Not regret it one bit! He started walking the day he came home.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments

Walked day he came home. And ran a week later. Hes quick as hell still.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Yes,

Comments

He did but not long term. Almost seemed sad or groggy for a month or two until all his hair grew back. Now I don't think he knows the difference.

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

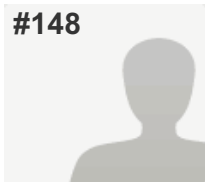

Yes,

Why or Why Not?

Griffin is still lightning quick, playful, loveable, and is inspiring to other dog owners. He wouldn't be my loveable pup if he wasn't a tripawd.

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Addie's leg was rotting off because someone left her tied up by it. She was around 7 months old. I wouldn't hesitate to do it again. She is a wonderful, mushy couch potato who keeps up with her 4 legged brother. I have my Addie because we removed her leg. She would have died otherwise.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments We adopted three weeks post amputation. The decision to amputate was made by veterinarians after she was surrendered to the SPCA.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She had to take shorter walks, but that could also be attributed to older age and arthritis; and by shorter, lots of multi-mile hiking was still done. Stairs, running, getting into and out of cars - none of these activities caused problems.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments None observed after adoption, and personality was consistent with observation records from her stay with the SPCA (which was several months).
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? The loss of a limb is much less of a problem than the continuous pain she would otherwise have lived with. I have no doubt that I'd have made the same decision.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One month
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments More protective of self w hen interacting w ith other dogs. He used to really like playing w ith other dogs; now he only feels comfortable w ith puppies. Kinda funny.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Better a happy three-legged dog than a dead four-legged one.

PAGE 1

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	11-20 lbs (4.98-9.07kg)
Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments We adopted Ozzy when he was 6 weeks old, he was found with a fractured leg that they pinned together but wouldn't take, his leg was amputated before we got him. He lost his legs at around 6 weeks old.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments When we first brought Ozzy home I was completely freaked out because we live in an apartment on the third floor. He had a hard time climbing the stairs mainly because he was scared and when we took him on walks he didn't walk wonderfully, he would drag his back a little bit. He was still a baby at the time and I think because he was in the shelter he didn't have as much exercise as he needed. After a few weeks Ozzy was running, walking, jumping, and climbing the stairs with ease!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) Not sure, he was missing a limb when we adopted him, but adapted to his new environment quickly.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Although we didn't know Ozzy before he had his amputation since he lost it very, very young, we see other dogs that have problems with their limbs and our dog gets around better on three legs! If we had another dog that needed an amputation we would do it in a second. He is not hindered at all by his amputation.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments Not really opposed, but shocked and horrified. I had a terrific vet who helped me intellectually understand that it was "okay." And once I saw how quickly my dog recovered, I rapidly overcame my shock and sorrow.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Beyond great! Like great times 10. My dog taught me so much :-)
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week, Other (please specify) Day after surgery my dog didn't seem to have any problems at all. Seriously.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Absolutely! I got 5 more years with my dog (He lived to be 14) Being a tripawd never seem to bother him at all.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	91-100 lbs (41.27-45.35kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments It was a brachial plexus avulsion with just a small chance the nerves would regenerate. Our dog was otherwise healthy and we made the decision that his life would continue with or without the leg.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments We had waited a few weeks to see if the nerves would regenerate and during that time the leg was dead weight. I think the amputation was a relief. After the first week he was getting around as if nothing had happened. He even adapted by hooking his foot into the chain link fence so he could still lift a leg to pee.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? In the same or a similar situation involving an accident with a healthy dog, I would definitely opt for the amputation. I would have many more questions, though, if it was an amputation due to cancer, and I can't honestly say what I'd do.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments We were frightened but we were told it would save him. It was supposedly a non spreading cancer. After researching and especially this forum, we thought it would be the best thing for him.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Fair, Comments He seemed sad but he was able to get around.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One month
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments He seemed to be sad. Especially because he could not get up the steps. We had a ramp built off the deck for him and he seemed to be happier.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	No, Why or Why Not? Although the amputation gave us 9 more months with him, he seemed so sad. It broke our hearts. The cancer came back with a vengeance. Original tumor was on left front leg. After the amputation he seemed okay but within months, tumors started growing all over. The worst was when he got a large tumor on his tongue. We had to put him down this past June. I could not see him going through anymore. He struggled so much. He was my brave Dylan. He was a beautiful, sweet, yellow lab, only 7 years old. My heart is still grieving. The veterinary oncologist said the type of cancer he had was non spreading and once removed he would be fine. I don't blame the vet, I'm sure he could not predict. I do believe that if it was truly gone, he would have gotten along well after the amputation. It was not to be. I miss him so much. Dylansmom

Yes,

Comments

She had a nerve sheath tumor on her hind leg. We tried to save the leg first by removing the tumor but because of the kind and location of the tumor, the docs said it was pretty much impossible to get clean margins. It was. And to prevent the cancer from growing again and spreading to her lungs, we chose amputation.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Good,

Comments

She's an old dog, 14 now 2+ years after amputation. So it's harder for her than younger pups. She does pretty good but struggles with getting around on wood floors or full flights of stairs. She also visibly misses some of the things she used to do, like go for walks and playing hard with our younger dog.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

Six weeks

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Yes,

Comments

minor. She's a little less patient and more barks. I feel like she asserts herself as the alpha dog vocally since she can't match physically anymore.

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Shorter

Tripawd Dog Owner's Experience & Satisfaction Survey

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

I think it saved her life. Docs said the cancer would have almost certainly spread to her lungs next and been pretty aggressive. We've had another 2+ years with her and she is a happy dog. Immediately post surgery, she had a complication, which made her recovery difficult for the first few days at home. She was walking right away, but was in a lot of pain. Once we got through that hiccup, her adaptation went pretty well, considering her age. It took her about 6 months before she was able to stand on her remaining hind leg for a length of time without her muscle shaking (though that didn't stop her). Now that's not a factor at all. We also have a younger dog who was still a puppy at the time of amputation. I think having the puppy around to encourage playing helped her adapt and still does.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments It all happened so fast... had to make the decision quickly to get Slider out of pain.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments Everyone said he would be like himself in 2 weeks. Slider adapted well but he was not himself until about 3.5 weeks. Not sure if it was due to meds / being depression or combo. Now have heard that a front leg amputation is a bit harder to adapt to.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One month
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Seemed depressed. He was a very active dog prior. Agility / Scent detection / flyball dog.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Shorter
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? This is a tough question. For the first couple weeks I doubted my decision ... asking myself "what have I done to him". Now that he has adapted... I'm thanking God for each and every extra day that I have with him.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	21-30 lbs (9.52-13.6kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments After hearing stories from Tripawds.com, I had no worries about the amputation and was then OK with it.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments He is as good as he was before. No limitations at all!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? He is pain free and has a better quality of life. He is also receiving chemo and has a better chance at survival.

Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments I was not initially opposed to it, because I adopted him that way. I knew I wanted to meet him when I saw his picture in the ad for the local humane society. I did not know how it would be when we first met (but I have a strong attraction to special needs pups) and it was a whirlwind! This pup pulls hard on a leash, gets around better than my quadpaw and still needs to learn how to heel. Some times he runs so hard I'm afraid he'll hurt his remaining limbs!! I just feel bad that someone had to let him go, fend for himself and let this accident happen to him. Love him quad, or tripaw d!!
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments Some phantom limb pain, looks extremely sad when he goes to scratch himself with the amputated leg (he has a "stubby")
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It was necessary, it was impossible to pin

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments Thanks to finding the Tripawds website and downloading the book 3 Legs and a Spare we were able to make a hard decision much easier. It has been the absolutely best decision we could have made and we are so glad that our Harley is still going strong!!
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Still digging holes...just figured out he couldn't stand up and do it...means more mud for us, but he is happy!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments The only thing is that he tires faster, but this is to be expected with only having the one rear leg.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Absolutely, because so much of my thought process was human related. He doesn't care that he is missing his leg (with the exception of scratching his left ear.) Other dogs do not care either, he goes to the dog park and still enjoys sniffing and running around.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	91-100 lbs (41.27-45.35kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments She was already mostly getting around on 3 legs prior to amputation. She still had so much energy and zest for life. I knew she wasn't ready to die yet.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) Less than 1 week.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments She was still confident and outgoing but started to seek a little more affection.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It took away the terrible pain. She adapted really well. I never ever questioned my decision. I knew from the moment she was diagnosed that it was the right decision. Having said that, if the same thing happened to my current dog I don't know if I would make the same decision. Her personality is completely different and I don't know whether she would cope as well. It would be a much harder decision.

Q1: What was the reason for the amputation?

Cancer

Q2: How big was your dog at the time of amputation?

51-70 lbs (23.13-31.75kg)

Q3: How old was your dog at the time of amputation?

5-9 years old

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

Yes,

Comments

Unrelated disease, but I had lost a 2 yr old Munsterlander to idiopathic chylothorax 10 years prior. The surgery did not save her, and we had to euthanize within 2 days. I felt horrible, having put her thru the surgery. This past experience definitely affected how I first reacted to the prospect of amputation and osteosarcoma diagnosis.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments

He is joyful, active and has great quality of life. In his case this was the right choice.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

Three weeks

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Yes,

Comments

This was temporary. He appeared to be depressed. But I had read the pain killers could cause this. Once I stopped the drugs, he was bounced back to his happy self.

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Tripawd Dog Owner's Experience & Satisfaction Survey

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

Every situation is different. You will need to weigh the pros and cons. In Quinn's case, this was absolutely the right choice. Upon diagnosis, I was told that he would be gone within 8 weeks. He would be in terrible and increasing bad "red hot" pain during those last weeks and would eventually need to be euthanized because we would not be able to control the immense pain. It has been a year since the amputation. Quinn is still going strong and is happy. I have to run to keep up with him! No mistake, the first night home after surgery was scary. I don't know how long we will have together, but my decision to amputate was doing right by him, giving him "his" chance and his quality of life. My attitude thru this has been this is his best chance and we get what we get as far as longevity. So far, it has been a success. Public reaction to Quinn has been amazing. People waiting to meet him. Some wanting to share memories of their own three legged dogs.

Q1: What was the reason for the amputation?

Other (please specify) Infection to the bone

Q2: How big was your dog at the time of amputation?

Respondent skipped this question

Q3: How old was your dog at the time of amputation?

5-9 years old

Q4: Did your dog lose a front or hind limb?

Hind

Q5: Were you initially opposed to amputation?

No

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

Amazing how they adapt to having an amputation.....with my Great Dane she had carried a dead leg around 5 years after the amputation she was so much happier once she healed. I rescued her right at the time of the amputation.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments We were told that amputation and chemo therapy would give us the greatest chance to give our dog more time and a better quality of life.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Within 2 months our dog was doing an entire flight of stairs! Adaptation was great. He knew his limits. Only was leary of slippery floors and, of course!, ice.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks, Other (please specify) By the time the stitches came out he was doing very well.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Leary of surfaces and mindful of his steps and his play with his furry sister. He actually pheasant hunted better on 3 legs than he did on 4 legs! He stayed closer to the hunters and enjoyed every minute.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? We wouldn't want any pet to have the pain from bone cancer. They can adapt quite well on 3 legs.

Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments Didn't have time to be opposed to it, really. Found out her leg bone was snapped in 2 and had to make an immediate decision. She adapted to the change easier than we ever would have imagined.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments Within 6 weeks she was running at full speed around the backyard.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Six weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Unfortunately the cancer had already spread and she only lived 2 mos. after the amputation. However, we truly believe she was not ready to go the day she had her leg amputated, so we did do the right thing at the time.

Q1: What was the reason for the amputation?

Accident

Q2: How big was your dog at the time of amputation?

31-50 lbs (14.1-22.67kg)

Q3: How old was your dog at the time of amputation?

1-4 years old

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

No

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments

I was amazed at how quickly Girly adapted. She does things now I never dreamed she would do.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

Three weeks

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

We didn't have a choice. She had too much nerve damage to make the limb useful.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments I was shocked that an amputation was required for a broken leg and considered euthanasing my dog, but then decided that it was unfair to kill an otherwise healthy young dog for a broken leg and opted for the amputation
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Apart from tiring more easily this dog does everything she did before the loss of the leg. She runs flat out but does have difficulty in stopping and turning and sometimes overbalances but she tended to be this way before the accident its just a bit worse now
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments This dog suffered from separation anxiety and extremely destructive behaviour when home alone. This is how the accident leading to the amputation happened. Since the amputation it is as if she has been transformed as she no longer chews or destroys things. She is still very excitable but her behaviour has improved to the point where we can now manage her whereas prior to the operation I was having to consider returning her to the shelter due to her extremely bad behaviour
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? She has a good quality of life

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments Joe had a very aggressive type of cancer that could have rapidly spread to his lungs. Our vet found the lump in an office exam and sent us to a specialist. The specialist wanted to operate that day. We took a few days to get the \$ together and then proceeded with the surgery.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments Joe can't or won't do stairs and he falls down a lot.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Three weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments He knew as well as we did that his leg was gone and started being very careful outside on rainy/snowy days.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It saved his life. If we didn't do it he would have died when the cancer spread to his lungs.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments There was no option other than euthanasia. The leg was too badly damaged to save. But other than a cut that needed sutures and I'm sure some bruises, the damage was limited to her left front leg. Sally was and still is an extremely active, enthusiastic and happy dog. I was not opposed to the amputation, but did have some concerns about her ability to adapt.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments The only problems Sally had in the first few months after healing came from her forgetting her limitations and making unrealistic leaps from the porch, which usually did not end well. But she finally figured out how to avoid these accidents. Getting up onto surfaces, such as the porch or into the truck, is always easier than getting down again, due to missing a front leg. As she has aged (9 1/2 now), we found it helpful to purchase a ramp for getting in and out of the pickup. She rides inside, of course, never in the back.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Three weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Under the exact same circumstances, I would make the same decision. She was young and healthy and her vet assured me he would have made the same decision if it had been his dog. I probably would not have opted for amputation had the situation been cancer or other long-term problem because of the very real possibility of recurrence putting the dog through unnecessary suffering. But whoever can say what they would do until faced with it?

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments We wanted to be sure we made the decision with our dog in mind and were exploring the surgery only after deciding that she still seemed excited to be around - going for walks, eating, playing - despite a serious limp.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments The first few weeks were rough since we struggled to find a therapeutic dose for pain management but she was able to get around well within two weeks. Once she was weaned off of all of her medications (over two months of time) our dog became more energetic and vibrant. While she can not go for the 15 mile walks that she once could, she is perky, interested in going on shorter adventures and continues to love to be around other people and dogs. She is definitely more snuggly/needy than she was before - not a bad thing anyways...
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments once the meds were done (she was on tramadol, novox, and gabapentin) she returned to being her perky, vibrant self.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Yes, because she has fully recovered from the surgery and seems to be enjoying life; my biggest fear about the surgery was thinking that she would die from the cancer before getting to fully return to the fun things she liked to do before surgery. She would also be gone by now if we had not done the surgery and she is still going strong.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	<p>Yes,</p> <p>Comments</p> <p>Amputation was a scary prospect. I considered my dog too big to cope. At first the vet said amputation was the way to go. Then another vet at the practice said she would perform leg sparing surgery, removing the affected bone. This seemed like a ray of hope so we went ahead.. Following surgery my dog started to gnaw at his leg and he spent many weeks in bandages which was very inhibiting. Quality of life was poor. 3 months later a my dog started to limp again and it was confirmed the cancer had returned higher up the leg! Amputation took place 6 weeks ago. Now the leg has been amputated my dog is so much happier. I realise how much pain he was still in. They actually discovered he had broken the pin they had inserted in his leg. I wish amputation had been done in the first instance, my fears were unfounded.</p>
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	<p>Good,</p> <p>Comments</p> <p>My dog has adapted really well. The only problem is he has strained his back legs which he did in the first week. He is building up stamina and the strength of his rear legs..</p>
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	<p>Yes,</p> <p>Comments</p> <p>Different sleeping position - mostly on his back! Very happy..</p>
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	<p>Yes,</p> <p>Why or Why Not?</p> <p>Definitely the best thing. Once the leg has gone, the cancer has gone with it.. It may have spread but at least the limb itself can no longer be a problem. My dog is much happier on three good legs. He has adapted quickly and doesn't seem to notice himself.</p>

Q1: What was the reason for the amputation?	Other (please specify) abuse by previous owners
Q2: How big was your dog at the time of amputation?	11-20 lbs (4.98-9.07kg)
Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	<p>Comments</p> <p>Annie was abused by her previous owners. I adopted her after she lost her hind leg. I knew she was a tripawd but that never concerned me.</p>
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	<p>Great,</p> <p>Comments</p> <p>Annie was a Lab/chow mix, weighing in at 70 lbs. In her prime, she was able to run in her own unique gait and do everything she desired. She adapted beautifully to life as a tripawd.</p>
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) unknown
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	<p>Comments</p> <p>Annie was very reluctant to allow her claws to be trimmed. She only trusted me or her favorite vet tech to do it; if anyone else did it, she would cringe and pant with anxiety.</p>
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	<p>Yes,</p> <p>Why or Why Not?</p> <p>Amputation is usually the only choice to save the life and alleviate the suffering of the animal. I have owned a tripawd dog and a tripawd cat--both adapted beautifully and lived to be in their mid-teens. Neither one ever lost quality of life. They both did everything four-legged dogs and cats do, just in their own fashion. They each developed arthritis in the hips above the amputated limb but that was in their old age, and managed with medication and massage therapies. amputation is not the worst thing that can happen to an animal...or a person, for that matter! It is difficult, but not the end of the world.</p>

Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments He is amazing--he runs, plays and is extremely well adapted
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two months
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Comments I did not know him at that time, I adopted him several months after the amputation
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	<i>Respondent skipped this question</i>
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? his leg was crushed and otherwise he would have been euthanized by the shelter

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	1-10 lbs (.45-4.53kg)
Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments I was not opposed, as he had 2/3 of his leg, and kept injuring the stump when trying to do things. He is in no pain now after amputation
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? He is no longer in pain now

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments I had three surgeries done to save her leg - only did amputation as last resort. Was so afraid of it.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She ran the first night! It took longer to learn a regular gait.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It barely slow ed her dow n and it got rid of the cancer that kept reoccurring. She ran and played like before very quickly - in fact many people at the open space w here she played w ere shocked she w as missing a leg. She had a soft tissue sarcoma and I w ouldn't amputate first time but I w ould if it came back. Other types of cancer I w ould consider it right aw ay. It gave her tw o wonderful cancer free years before getting lymphoma.

Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Comments N/A - His leg was amputated before I adopted him.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) Unknown -- his leg was amputated before I adopted him. He seemed fully adapted when I first met him at an adoption event two months later.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Comments Unknown -- his leg was amputated before I adopted him.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	<i>Respondent skipped this question</i>
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? My dog's leg was amputated when he was at the Humane Society shelter. I adopted him a few months later. If it had been my choice at the time his leg was amputated, I would definitely do the amputation. He has adapted wonderfully. He has no trouble getting around; he plays, runs, he's full of life and energy.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	1-10 lbs (.45-4.53kg)
Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	<p>No,</p> <p>Comments</p> <p>I was more concerned that my dog would have to be put to sleep. I did have concerns about the costs. I had complete trust in my vet who actually thought that amputation would be a better idea than the alternative, much more expensive operation which only had a 50% chance of working and, even if it was successful, there could be arthritis problems in later life. He said 'your dog will have a long and happy life with three legs'.</p>
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	<p>Great,</p> <p>Comments</p> <p>The leg was amputated in the morning; by that evening he was going round the garden, even going up and down the stairs out there. He is a male and was only 3 months old so still squatted to pee; this was a (very) small problem to begin with because he tended to pee over his remaining front leg but soon learned the best position to avoid this.</p>
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) immediately!
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	<p>Yes,</p> <p>Why or Why Not?</p> <p>He adapted so completely and quickly - we were very lucky. He now runs around with his two sisters - can actually run a lot faster than me - jumps up on to the sofa and bed even though he is quite a small dog (he weighs 5.5 kilos) and is completely happy.</p>

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	under 1 year
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments The amputation happened prior to my adopting him. He was hit by a car as a stray and a rescue picked him up.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments His first 4 years of life were exactly the same as most 4 legged dogs. He was faster than most 4 legged dogs, and he could jump and play as well. He had a back injury playing with another dog which has left him mostly healed, but he can not walk long distances or play with other dogs as risk of re-injury. He is not in pain in daily life as long as he doesn't over do it.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments I was told that he was very depressed for about a week after amputation, wouldn't eat or drink. One day he just got over it and started wagging his tail and was done feeling sorry for himself. He's a very very happy dog now.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? If I been the one to make the decision I would have made the same choice, as the other option was to put him to sleep.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments At first, it was very hard to deal with (the amputation) because I have my own health issues and I needed to be with my baby 24/7! It took a good 2 months for him to come around. I questioned myself in the beginning if I did the right thing, but now ...I am so glad I did. He has passed the 2 year mark and I am very grateful!
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments He's ten now, so I think with old age and not having 4 legs does make things a little more difficult for him. He also has some arthritis and hip dysplasia. He is a Golden Retriever.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two months
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments Right after surgery he acted very weird, and it took awhile for him to be comfortable to be able to hop outside, even with the harness under his belly. It was really bad on me, because I have a horrible back and had to try to lift him up at times. We finally talked with the vet and had them cut down on some of his pain meds, and that seemed to work and allowed him to be more active and more like himself.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Shorter
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Yes, as long as the cancer had not spread to the lungs and I would definitely give the dog Artemisinin (sp?) again!

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments My first reaction was no but within a few minutes I knew I had to the amputation so she could be free of her pain and give my girl a chance at life.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Tasha healed quickly almost a perfect recovery for her I was terrified for her , she showed me living life on 3 legs was no problem.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments She found a new love of life. She became much more loving and also when she lost her leg she found her voice and became very vocal.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Yes, yes , yes I would do it again. Never one regret . We gained 19 months with Tasha by doing the amputation.

Q1: What was the reason for the amputation?	Cancer, Other (please specify) osteosarcoma
Q2: How big was your dog at the time of amputation?	71-90 lbs (32.2-40.82kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments Although at first we were opposed, after much research and consultation, we decided on amputation. It was an agonizing decision but after 5 weeks we are beginning to see our happy girl return. She is adjusting well, getting back to her usual routine and we see improvements every day. At time of amputation she did not have mags showing in her lungs on exrays.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Three weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Comments During adjustment she was not her normal self but as she is learning her new reality and how to compensate we are seeing pretty much the same girl. I expect tons to continue to improve.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? I would much rather have our girl with us than to have already have had her put down which was the only other alternative given the increasing pain. Even with radiation and follow up treatment, there was still the risk of bone breakage.

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? I feel that we did the right thing for our dog because he was so young (only 5 months old) and he didn't have any other injuries than to his leg. If the situation had been different and he were an old sick dog who had injuries to more than one leg, we probably would not have done it/or do it again.

Q1: What was the reason for the amputation?

Accident

Q2: How big was your dog at the time of amputation?

1-10 lbs (.45-4.53kg)

Q3: How old was your dog at the time of amputation?

1-4 years old

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

Yes,

Comments

I was afraid of what it would be like to have a 3-legged Chihuahua. Her leg was broken in several places and splinting was not really an option. Amputation was our only option.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments

After a few weeks of pain and suffering after her surgery, she was raring to go and run around in the yard. Sometimes she even lifts up her hind leg on the same side as the amputation when she is running, and runs on only two legs!

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One month

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

Yes,

Comments

Very sad and in a lot of pain in the beginning. We do a lot of hiking and she missed that. I bought a dog sling carrier, and now she walks as long as she can, then asks to be carried when she's tired, then asks to get down again when she is rested. We are back to hiking the trails like before, only with a little adaptation for her tiring easier. It's more work to hop on three legs!

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

Longer

Tripawd Dog Owner's Experience & Satisfaction Survey

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

She does look different, but her personality is the same. It's easier that she is little and I can pick her up when she is tired. She sometimes hops in slow motion when she is looking for sympathy which is very funny! For the most part, she does everything like she did before. She wrestles with the cats, fights with our other dog, and runs around crazy in the yard. We still go hiking with some modifications, and I am very protective of her, but she has done very well. Also, it has made her a much friendlier dog because everyone wants to pet the three legged chihuahua!!

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments It w as scary, but not opposed to it.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Bo could still sw im, run, snuggle, chew bones, climb stairs....amazing!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week, Other (please specify) He adapted w ell but had phantom pains for at least a month.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments From cancer: yes From amp: no
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Amputation took the painful cancer aw ay. We never saw Bo in that much pain again. He got to enjoy the last 13 w eeks of his life happy, and pain free.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	11-20 lbs (4.98-9.07kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments This was a difficult decision I had to make. The cancer could not be entirely removed surgically and I did not want to "wait and see" if the cancer returned. I DO NOT TRUST CANCER!!! So, amputation was my decision, even though my dog seemed happy and healthy. Research and discussion, your website in particular, helped me make this difficult decision.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments She's been truly amazing. 4 days after her amputation, I was taking my other dog for a walk. She ran into the room where we keep their leashes and she "told" my husband that she wanted to walk, too! He called me, we turned around and met them halfway!!! I was amazed and thrilled!!!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments She seems to know her limitations and looks to me for help getting into the car, etc. Otherwise, you'd never know!!! Everyone is amazed!
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? The change in her life and ours has been minimal, with few adaptations (a stroller for when she tires during long walks, having our wood stairs carpeted). As I said before, I DO NOT TRUST CANCER and did NOT want to "wait and see" if it returns.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments Our Great Dane Atlas had a pre-existing condition that made us question his ability to be mobile if he lost a leg.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments With acupuncture atlas is doing great!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments Other than tiring out more quickly, Atlas is back to his normal routine at home with his mates and loving life.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? It gave atlas a pain free chance at life and you could tell instantly by his happy bright eyes that the awful pain was gone. It's like it took years off his life, he's running and jumping and dancing and playing like a puppy again!

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	21-30 lbs (9.52-13.6kg)
Q3: How old was your dog at the time of amputation?	10+ years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments My dog was 17 years old and I was concerned how he would adapt and if it were the humane thing to do
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments He has arthritis in his back and his balance is a little off, however he is alive, happy, edges his tail and gives kisses at now 19 years of age
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? He is doing fine. I think his age is where his problems lie, not with the loss of a limb. Of course that makes it a little more difficult, but I think no matter what it would have been difficult at his age

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	1-4 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) It would be difficult to say, due to other factors of her accident.
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments She is a more subdued dog since her amputation.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? She got caught in a "hunting" trap. Her leg was already amputated and the whole shoulder had to come off.

Q1: What was the reason for the amputation?	Accident
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments I was fortunate enough that my nurse sister was with me. She was able to explain why the destroyed arteries and shattered bones would not heal properly.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments Amazing how many people don't notice!
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) She was released from the vet 8 hours after her amputation, raring to go
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments She became more social to people. Prior to amputation she was very aloof, now she comes up for loves all the time. All my friends have commented on this behavior change.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	No, Why or Why Not? It won't let me pick both! I would absolutely go through with the amputation but would not have chosen a partial. I would have asked they did a full. The stump produces many challenges that I don't feel we would have had with a full amputation.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	91-100 lbs (41.27-45.35kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	Yes, Comments we were originally opposed but the light in her eyes--Karina was definitely not ready to go. Yet it was clear her limping and probably the pain were getting worse--why keep her in that if "all" that had to be done was to get rid of the source of both "problems"
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments she had been on 3 legs several days before the amputation so was already somewhat used to it. She was in the hospital only one night and as soon as she got home the next day she jumped up onto our bed, where she liked to spend the day if we were out, and triumphantly looked at us as if to say I'm home! and look what I can do. But she quickly recognized that that behavior quite so soon was not a good idea--no problems with the wound or healing, but it was several days before she tried anything like that jump again.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Other (please specify) she accepted the need to go slow, but seemed to adapt literally immediately--though had had a few days of experience going 3 legged before the amputation
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments sh--hard to explain but everyone, even people who did not live in our house, some who didn't even know her very well noticed that she seems to have begun moving to what felt like a more "spiritual" level of being.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer

Tripawd Dog Owner's Experience & Satisfaction Survey

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

she was definitely not ready to go, before the operation; that's why we changed and gave her the amputation. She did not get to live very long--we had been on the alert for the possibility of her front leg osteosarcoma getting into her lungs, which we had been warned was a real possibility, but it got into the tail end of her spine, There really were only a few of good weeks between recovery and the need to call; thank goodness the vet is near and was able to come to our house. But those weeks were worth it, clearly for Karina and equally for us..

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	101+ lbs (45.81+ kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	Yes, Comments At first yes because we didn't see how a big dog (irish wolfhound) could manage, but we then contacted a couple of wolfhound owners who had had their dog amputated and they convinced us that it could work well.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good, Comments He was very ill in the vets at first as he had pneumonia so that delayed his getting back home and trying to get around. It also meant that his leg weakened whilst he was in the vets. However, with good rehab services, he is getting up and about very well on his own and is learning what he can, and can't do. He is a very happy boy now.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Two weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	The Same
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Without the amputation he would be dead now - his cancer was a very fast growing aggressive one. There is still the possibility that the cancer has already spread into the rest of his body, but he is on metronomic chemotherapy to try to help this. So the real choice was 3 legs or no legs and given that choice, we would go for 3 legs again.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments The tumor was so big there was no other choice. Rosie had been limping for awhile and the vet kept saying it was arthritis. The doctor checked her out several times and even had x-rays. Finally, a new vet did x-rays and showed us that there was a huge tumor.
Q6: How would you describe your dog's adaptation to the loss of his or her limb?	Fair, Comments She is definitely a changed dog. To make matters worse, our other dog, Max, had cancer and had to be put down. They were so close and Rosie had been depressed for a long time. She went through the surgery with no problem. She actually was up and walking the next day. But she seems to have lost her zest for life. We take her for a walk every day but she likes the ride better than the walk. It's been a year since her amputation. She was a ball dog and loved to chase the ball. Now we have modified the ball play. We play inside and then I throw the ball to her. We do this several times a day and that seems to make her happy. Also, she loves to eat which is the problem since she is overweight.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	Yes, Comments We live on 2 acres and she used to run out to the pasture every morning. She would check the whole perimeter and then come back to the porch. Now, she just goes out on the porch and stays there. We live in a mobile home so there are stairs going outside. She has a lot of trouble going down so we built a ramp on one side. She goes down the ramp and comes up the stairs. Also, she doesn't like to be alone. She wants to be with someone all the time. Even in the house.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer

Tripawd Dog Owner's Experience & Satisfaction Survey

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

No,

Why or Why Not?

I've thought about that a lot lately. I don't think I would do it again. I'm happy that we had her for an extra year but I feel so bad when there is another dog around and she can't go out and play like they can. I don't think she's in pain but I think her personality has changed so much. She's a beautiful Australian Shepherd and loved to roam around the property but now she just lays on the porch. So far, she hasn't showed any signs of the cancer coming back and the vet gave her 10 months to a year and she's already gone beyond that point,. Maybe, we did the right thing but if given the choice I wouldn't do it again.

Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Front
Q5: Were you initially opposed to amputation?	No, Comments I was told by my vet that large dogs don't do well with amputations, especially front leg ones. I found tripawds.com and saw videos of a great dane and an irish wolfhound who were thriving as well as Jerry a few GSD who was hiking in the woods & up and down hills. They gave me inspiration and hope and Eisen lived 4 years post amp and died at a ripe old, old age of 13!
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? There were not other options really except to put him down, limb sparing - which you pretty much need to live within minutes of the few places that do it and it's WAY costly and more uncertain, or do the amputation.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	31-50 lbs (14.1-22.67kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments I had met other tripawds and had read an article in The Bark Magazine that had an impact on me prior to my dog's diagnosis. Once the vet said she would probably be pain-free within a few weeks I was in. It was shocking at first though.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great, Comments My dog would have gone for a hike the day of the amputation. She was crazy like that, and never missed a beat.
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments No. It was truly amazing.
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? Absolutely.

Q1: What was the reason for the amputation?	Other (please specify) arthritis, failed femur head surgery
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments No, I thought I was going to lose him, so finding out there was an option was ok. Vet said "you could let him go, or we could take the leg. I'd support your decision to let him go, but I think it would be the wrong decision..." :)
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Good
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	One week
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Yes, Why or Why Not? He has had almost 2 years now, happy. His front legs are bad, so he gets tired, but he is managed with tramadol/previcox/cartrophen. Yes, I would do it again. It was a horrible time when he was having operations to try and save the leg (X6) but he actually walked out of the surgery 2 hours after amputation. I should have done it sooner. maybe.

Q1: What was the reason for the amputation?	Cancer
Q2: How big was your dog at the time of amputation?	51-70 lbs (23.13-31.75kg)
Q3: How old was your dog at the time of amputation?	5-9 years old
Q4: Did your dog lose a front or hind limb?	Hind
Q5: Were you initially opposed to amputation?	No, Comments Jackson was/is a healthy dog at the time and was active and strong. I was never worried about how he'd do on three legs. I knew he'd get around just fine! It was the cancer that worried me and angered me.
Q6: How would you describe your dog's adaptation to the loss if his or her limb?	Great
Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?	Three weeks
Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)	No, Comments Except, now he LOVES having his stump rubbed and enjoys a good scratch on the right side of his body (his missing back limb can't do that anymore....).
Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?	Longer
Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.	Why or Why Not? Yes! It's a beautiful gift of life and time. Thankfully his postop was great and his pain was very well managed. We didn't have any complications. He has adjusted marvelously and I'd do it again.

Q1: What was the reason for the amputation?

Accident,

Other (please specify)

taken to shelter - ensnared in fishing line so tight it cut off circulation and was severing the limb.

Q2: How big was your dog at the time of amputation?

1-10 lbs (.45-4.53kg)

Q3: How old was your dog at the time of amputation?

under 1 year

Q4: Did your dog lose a front or hind limb?

Front

Q5: Were you initially opposed to amputation?

No,

Comments

shelter officials decided to not euthanize the pup and had amputation surgery to save her. I was not a part of the decision, I fostered, then adopted her after the fact.

Q6: How would you describe your dog's adaptation to the loss if his or her limb?

Great,

Comments

Since it was amputated at a very young age, 8 weeks, she really has no idea she is a tripawd.

Q7: Approximately how long did it take for your dog to adapt to the loss of his or her limb?

One week

Q8: Did your dog have any changes in behavior after the loss of his or her limb? (if yes, please comment)

No

Q9: Did you expect your dog to take longer, shorter or the same amount of time it did to adapt to the loss of his or her limb?

The Same

Q10: Knowing what you now know, if given the choice again today, would you do the amputation again? Why or why not? Describe below.

Yes,

Why or Why Not?

Kaai is one happy life loving dog - every one comments on how 'full of life' she is. As for me, a very welcome addition to my life and has become a sister to my other dog Cori.
